Professional Summary

Motivated Computer Science student with strong problem-solving skills and a solid foundation in C++ and Data Structures & Algorithms. Proficient in software development and machine learning, with hands-on experience building practical solutions. Currently expanding expertise in MLOps and actively learning DevOps practices to bridge the gap between development and deployment. Passionate about becoming a full-stack developer with a specialization in machine learning, combining scalable backend systems with intelligent, data-driven applications. Known for clear communication, adaptability, and a proactive approach to solving complex challenges.

Skills

- **Full Stack-** Frontend, Backend, Database
- **Programming Language:** - C++, Python, Java
- **Tools:** - Git, Github, Rest APIs, CRUD operation, workbench
- **Concepts:** - DSA, Machine Learning, Full Stack
- **Soft Skills:** - Team Work, Leadership, Persuasion

Experience

Data Science Bootcamp

June 2025 - July 2025

- Completed an intensive bootcamp covering core data science concepts including data preprocessing, exploratory data analysis (EDA), and machine learning fundamentals.
- Sharda University
Greater Noida, UP

Internships / Training

Algorithmic Trading A-Z with Python

August 2025

About: Learned to design and implement algorithmic trading strategies using Python, focusing on technical indicators and market signals.

Udemy

Machine Learning A-Z

August 2024

About: Acquired strong foundations in supervised and unsupervised learning algorithms including regression, classification, and clustering.

Udemy

Projects

- **Algo Trading**

Tools / Technologies Used: Python, Pandas, NumPy, TA-Lib, API-based trading, Backtesting, Data Visualization, Git.

About: Algorithmic Trading, often referred to as "Algo Trading," represents a transformative approach to financial markets by automating the process of trading using computer-executed instructions.

- **Neura AI**

Tools / Technologies Used: Python, NLP, TensorFlow/PyTorch, Deep Learning, Sentiment Analysis, Emotion Recognition, Neural Networks, Git.

About: Neura is powered by advanced Natural Language Processing (NLP), emotion recognition systems, and deep learning algorithms that allow it to interpret the tone, sentiment, and context of user inputs

Education

- **Sharda University**
CGPA 7.8

Btech CSE 2027 Batch
